Enclosure No. 1**The Amended Claims.**

I claim:

1. A device for the evacuation of intestinal contents comprising a thin-walled tube everted under the fluid pressure, where the everted part (15) is joined with a branch pipe (2), but the non-everted part (15) repeats the form of a drain (17) enclosed in it, **further comprising** a hose (19) with punctures enclosed in the drain (17).
2. The device according to claim 1, **further comprising** a hose (18) with punctures enclosed in the non-everted part (15) of said thin-walled tube.
3. The device according to claim 1 or 2, **further comprising** a tube (20), where the end of said tube is joined with the end of the non-everted part (15) of the thin-walled tube and the drain (17).
4. The device according to any preceding claim, **further comprising** a cylinder-piston unit (31) located in the branch pipe (2), where in the cylinder of said unit is placed a carriage consisting of a hollow piston (8) and a tube (12), interconnected by a cuff (10) and its distancer (13) and said tube (12) has an external seal (3) fixed in the branch pipe (2).
